Abstract (en)

[origin: EP0905322A1] The removable road sign comprises a long section (1-2) with flexible sides and longitudinally rigid integral with road signs (3). The road signs are pins forming a small raised part relative to the flexible section. The signs are in a plane angularly displaced relative to the flexible section when the section is placed flat on the road. The signs are pivoted relative to the section so as to occupy vertical or flattened positions.
