Abstract (en)
[origin: EP0905343A2] The pane or panel frame is displaceable along a guide track so that it at least partly effects a covering with another fixed, but pivotable pane or panel frame. The displaceable pane or panel frame is pivotable into its position on the fixed pane or panel frame. The guide rollers (14) can be brought out of engagement with the guide track by means of an operating mechanism, when the displaceable pane or panel frame is located in the position pushed onto the fixed pane or panel frame. The guide rollers are displaceable by means of the operating mechanism (12) relatively to the under edge of the pane or panel frame (3). In the area of the guide rollers on the under side of the pane or panel frame or on a running mechanism housing on the pane or panel frame at least one static guide groove for the guide rollers is arranged.
