Abstract (en)

A sliding door, e.g. in a vehicle, is driven by an electric motor (4) mounted external to the door. The servo drive is activated by two sensors (10,11) which monitor the movement of the door handle. At least one end stop sensor (9) is activated by a stop (7) on the door when in the fully open position. Another, or the same, sensor monitors the fully closed position of the door. A simple control logic activates the servo drive from either end stop setting. No manual force is required to operate the door.

Abstract (de)

Zum elektromotorischen Schließen einer Kraftfahrzeug-Schiebetür (1) ohne manuellen Kraftaufwand und Betätigen eines Schalters enthält ein Betätigungsstromkreis (5) des Elektromotors (4) zumindest einen Sensor (10, 11) für Stellungsänderungen von Türgriffen, hervorgerufen durch manuelle Türbewegungsbefehle. <IMAGE>
