Abstract (en)

Electro-luminescent sheet material has a layer of a phosphor which is sandwiched between a pair of electrodes of which at least one is translucent. Such material is used as a source of illumination for a window display. The material may be in the form of a sandwich having a ply which is self-adherent to glass and which is covered with a peelable protective covering. It is suitably in the form of a string of interconnected linguistic characters or in the form of a single linguistic character.
