Abstract (en)
[origin: WO9746131A1] The invention discloses a flexible metal band, for producing bracelets, formed by a plurality of identical elements (10) hexagonal in cross section, arranged side by side and interlinked by linking devices (11). Each element (10) comprises a lower piece (12) and an upper piece (14) superposed on each other. The upper piece (14) is ring-shaped and encloses a sleeve (17) which extends axially on the upper surface of the lower piece (12) for mounting the upper piece (14) on the lower piece (12). Each linking device (11) is constituted by a triangular loop that interlinks three adjacent elements. The loop (11) is located in radial grooves (21) provided on the upper surfaces of the said three adjacent element lower pieces.
