Abstract (en)

[origin: WO9742899A1] A reservoir module (50) which is connected to a peristaltic pump to administer carefully metered quantities of medicament to a patient is disclosed. The reservoir module (50) comprises broadly two connector assemblies (1) and two vials (5). Each connector assembly (1) comprises a support member (2), an adaptor (3) for attaching to a vial (5), and a vial cover (4). The adaptor (3) defines a flow path therethrough which places medicament within the vial in fluid communication with the suction conduit of a pump. The vial cover (4) encloses and receives the adaptor (3) and vial (5) and holds them securely to the support member (2). Apparatus for administering medicament to a patient in need thereof including a reservoir module as described above in combination with a peristaltic pump is also disclosed.
