Abstract (en)
[origin: WO9748959A1] A high angle fire gun (1) has at least one adjustable, swivelling tube (3), a tube adjusting mechanism and an adjusting mechanism pointing device (7) for pointing the tubes (3). In order to ensure a wide pointing range with a device which is easy to handle, the pointing device (7) has an independent pointer (8), preferably arranged apart from the adjusting mechanism, for actuating the adjusting mechanism so as to laterally and vertically point the tubes (3) by rotating each tube axis (A) along a conical surface around a vertical axis (H) and/or by swivelling each tube axis (A) along an axial plane through said vertical axis (H).
