Abstract (en)

[origin: EP0906825A2] The method involves using at least two imprintable print forms in the printing machine, with which several prints can be produced after a single imprinting, whereby the second print form (110) is imprinted during a printing with the first print form (104). The print forms are preferably exchanged on-the-fly between the use of the first and the second print form, and the imprinting of the print forms results through local irradiation.
