Abstract (en)
[origin: EP0906862A2] A manual or power-assisted steering control linkage assembly for an automotive vehicle, with the aim of facilitating the manufacture of housings for the steering control linkages and eliminating undesirable vehicle noise which results from axial stresses acting on the steering mechanism. A housing (1) including two independent metallic tubular housing elements (1',1'') which are machinable, which housing elements (1',1'') house and provide support means for the rack (2) and pinion (3), wherewith the tubular housing elements (1',1'') are joined in the required angular orientation via welding or brazing at respective contoured openings cut in the walls of the tubular housing elements (1',1''). The noise control is provided by automatic positioning the pinion (3) in engagement with the rack (2), which by elastic organs (11) associated with the pinion shaft (7), which organs (11) continuously urge the pinion (3) into engagement with the rack (2) in response to the tendency of the rack (2) to separate from such engagement. The elastic organs (11) cooperate with a conical or cylindrical pinion (3). <IMAGE>
