Abstract (en)

[origin: EP0906888A1] The device has a chamber (3) connected to the interior of a conduit (2) via through passage apertures (7) and can be fed with vacuum in order to suck away a conduit (5) residual fluid remaining in the feed conduit in the area of an outlet aperture (6). A circuit sets the suction device (1) in action, e.g. feeding the chamber with vacuum, when the fluid flow through the conduit is interrupted by a cutoff conduit.
