Abstract (en)
[origin: WO9744266A1] The present invention relates to a bottom-dump container (1) comprising a container portion (2) having at least two bottom doors (4, 5) situated opposite to each other and which by aid of hinges (3) are pivotably connected to the container portion (2) and fork tubes (6, 7) supporting said container portion (2), said fork tubes, when changing their relative distance by e.g. a fork truck having adjustable fork distance in the horizontal plane, admits opening or closing of the bottom doors (4, 5). Each bottom door (4; 5) comprises an extension (21, 22) having a gear formation (23, 24) on at least one end wall (15, 16) of the container portion (2) over and above said hinges (3) during closed container, said gear formation is turned towards and is able to cooperate with the extension of the neighbouring bottom door with the gear formation belonging to it for synchronizing opening and closing of said bottom doors (4, 5).
