Abstract (en)

[origin: WO9744267A1] The invention concerns a device for sorting litter, household refuse or the like in a container, a holder device or the like, and for disposing of the refuse separately. The device comprises at least two separably interconnected sack-like chambers which are formed from foil material and are interconnected in their upper regions such that they merge into a common region (2) in the manner of a pair of tights. A gusset (6, 7) is formed in each case between adjacent chambers (3, 4).
