Abstract (en)

[origin: WO9746475A1] A device for transferring a film (2) located on one side of a foil strip (1) from the foil strip to a substrate has a housing (3) which contains a feeding reel (4), a take-up reel (5), deflecting guides (6) and an applicator (7) which projects at least partially out of the housing (3). The foil strip (1) is fed by the feeding reel (4), is guided through the applicator (7) and wound on the take-up reel (5), which is coupled to the feeding reel (4) by a friction coupling (9). The contact areas (13) of the friction coupling (9) with the feeding reel (4) and the contact areas (14) of the friction coupling with the take-up reel (5) are mutually offset in the radial direction. The friction coupling is in particular implemented with an O-ring (9).
