Abstract (en)

[origin: DE19625898A1] The invention relates to a display system and a process for supplying a display system with a picture signal. The picture signal is delivered in relation to the system timer of the display system, thereby producing an improvement in the picture quality. Particularly good picture quality is produced when the change from the picture signal for one pixel to the picture signal for the following pixel is selected to be time-delayed at the scanning point at which the display system scans the picture signal.
