Abstract (en)
Ergonomic infant sitting aid to be used during the first months of life, in which the infant can sit and play, with the peculiarity that it consists of a monoblock comprising a base, two lateral armrests and an opposing element placed in the middle of the front side, the armrests being of such a form and size and equipped with the means necessary to make the structure ergonomical, and supplied with holding means for the safety of the infant. This sitting aid is directly placed on the supporting surface, on the floor or on an elevated plane, so that there is no important difference in height between the surface and the infant's legs. <IMAGE>
