Abstract (en)
[origin: EP0908693A2] The radiator has a part through which a heat-carrying medium flows and a part taking away this heat. The flow part can be connected to tubes. It includes a flat panel (12) containing flow channels (14). There are clamping elements on at least one outer surface of the panel for sheet inserts (36) used to take away the heat. The flat panel and/or the sheet inserts may be made of extruded strips of a non-ferrous metal alloy. The panel may have two walls (16,17) with parallel cross walls forming the flow channels.
