Abstract (en)
[origin: EP0908701A2] An object of the present invention is to provide a new pedometer with game mode which can be used as a game by a child to get some exercise such as walking and/or running without reluctance. When a vibration is detected by a vibration detector, the count values of a step-number counter and an integrating counter are incremented, and thereby a display state of a character displayed on an LCD is varied based on the count values of step-number counter and/or the integrating counter. <IMAGE>
