Abstract (en)
[origin: DE19744563C1] the switch has a sprung step mechanism whose axle actuates the switch drive, pref. a switch shaft. A lever (8) actuated by a magnet (9) is moved by the actuation. During its movement (22) the lever decouples the spring mechanism axle (19) from the switch drive (20). Further movement of the lever causes actuation of the switch drive to switch off the isolation switch, after which the coupling between the step axis and the switch drive is remade.
