Abstract (en)

[origin: WO9831329A1] The invention concerns cosmetic or dermatological compositions containing in a cosmetically acceptable aqueous medium, as coating agent for keratinous fibres, 15 to 60 % by weight of dry extract of a film-forming mixture consisting of: (A) at least an aqueous dispersion of polymer particles capable of being film-formed on their own or film-formed in the presence of at least one plasticizer; the glass temperature T_g of the polymer or of the polymer/plasticizer being not more than 25 DEG C; and (B) at least an aqueous dispersion of spherical and anisotropic particles not capable of being film-formed, for forming a percolation network dispersed in the matrix of the film formed from the particles capable of being film-formed and optionally from the plasticizer; said particles not capable of being film-formed are different from the pigments and are present in said film-forming mixture in concentrations ranging from 20 to 90 % by volume when they are spherical and in concentrations ranging from 10 to 80 % by volume when they are anisotropic. These compositions can be used as base for make-up products for eyelashes and eyebrows or as base for capillary products for hair styling and/or hair care.
