Abstract (en)

[origin: WO9742858A1] A row of at least two seats including a supporting structure (30), seat members (20) mounted thereon, and a housing combined with said supporting structure for receiving cables or ducts (46), is disclosed. Said housing is defined by a channel section (40) extending along a plurality of seats and capable of being opened in such a way that said section may be accessed substantially along the whole length thereof. The system is particularly useful for simplifying wiring arrangements in seats provided with various fittings, especially in public places.
