Abstract (en)  
[origin: WO9802128A1] A magnetic needle for acupuncture is disclosed. The magnetic needle of this invention has a housing having an opening and a magnet seated in the opening of the housing. A wedge-shaped projection is held in the opening of the housing so as to project into the exterior of the bottom wall of the housing and come into contact with the magnet. The projection forms an intensive magnetic field around a meridian point having fine electric current or electromagnetic waves. The projection thus magnetically stimulates the meridian point while performing a magnetic massage effect on the meridian point. The magnetic needle accomplishes an acupuncturing effect for relieving pain and curing disease as expected in typical acupuncture.
