Abstract (en)
[origin: DE19714193A1] The invention relates to a device (10) for fixing components (20), specially pneumatic elements, by using fixing elements (22). The inventive device (10) consists of several fixing plates (42, 44, 46) arranged in parallel and placed in-between two profiled bars (14, 16) by means of screws (18). Sliding blocks (76, 86) are disposed in the grooves (74) on the longitudinal sides (66, 68, 70, 72) of the fixing plates (42, 44, 46) and placed in-between the individual fixing plates (42, 44, 46) of the inventive device (10). Any number of sliding blocks (76, 86) can be positioned therein as desired. Said sliding blocks are easy to assemble, they mask any possible gaps and render the inventive device (10) more rigid.
