Abstract (en)

[origin: DE19714329C1] A vertically arranged bread-slicing machine has an oil dispenser for the cruciform cutting blades (3) rotating on rollers (2). The oil is applied to the cutting edge (30) by a felt mantle (63, 73) soaked in oil. The felt mantle (63, 73) is attached to rollers (6, 7) located each side of the blade. The novelty is that: (a) one or both of the oil rollers (6, 7) may be swivelled through the horizontal axis (6S) away from the cutters (3) to a position (P1), and (b) when in that position (P1), the rollers (6, 7) can be shifted in the direction of their length (L) with respect to the blades (3) by a defined distance (A).
