Abstract (en)
[origin: WO9848130A1] In order to develop a device enabling efficient setting of floor coverings, including prefabricated wood floor or laminated panels, comprising at least one prestressing rail, one limit stop (16) at a first end of the prestressing rail and a first guided-travel fastening element having a first prestressing surface for laying the floor covering material thereupon, it is suggested that a second guided-travel prestressing element be added and secured to the prestressing rail and that a setting device be provided to enable both prestressing elements to be moved away from another.
