Abstract (en)
[origin: WO9801881A1] A control component has a substantially square housing (11) with a coupling side (14) that can be connected by means of plugs to a matching connection side (25) of a square relay housing (21). Complementary plug-in connecting elements (26, 27) which can be mechanically and electrically interconnected are provided in the coupling side (14) and in the matching connection side (25) to electrically and mechanically couple the control component (10) to the relay (20). An universal relay may thus be transformed into a special relay with a particular special function by plugging the control component on the relay.
