Abstract (en)

[origin: WO9801993A1] A television tuner (10) controller has a memory (22) with a number of sets of remote control codes for use in controlling a television tuner (10), such as a cable box. The television tuner changes the channel it is tuning to a specific channel when it receives a set channel remote control command identifying the specific channel. The tuner (10) controller can detect the channel tuned by the television tuner (10) whenever the predetermined base channel is tuned by the television receiver (14).
