Abstract (en)  
[origin: EP0911199A1] The arrangement includes a door (80,90) which is connected by a nut element (20,30). The nut element is adjustable through a spindle (10), according to a spindle-nut drive, horizontally along a vehicle wall (14) comprising the door aperture. The spindle is driven through rotating drive devices (60,64) which comprise a self restraint in such a way that a sure locking of the door is guaranteed in closed position.
