Abstract (en)

[origin: EP0911239A1] The axle or pair of axles, forming a bogie, is designed to fit a vehicle with an integrated floor. The axle, or at least one of the pair of axles, is formed from a carrying beam, which carries out the function of supporting the load and of driving the wheels. The carrying beam contains at least part of the elements, which ensure the transmission of movement, between the motor and the wheels.
