Abstract (en)

[origin: EP0911468A1] The security bolt comprises a body in which a key (6) translates. A control lever (3) displaces the key between neutral and armed positions. Disarming means enable the key to be moved from the armed to the neutral position. These means comprise a slider (11) which is translated relative to the key by the control lever during movement of the key to its armed position.
