Abstract (en)

[origin: US6260823B1] The invention concerns a liquid container for drinks such as a can, party keg or drum, having a peripheral wall (1,13,31) and lids (14,32). A tap (4,15,34) with a closed and opened position is inserted in a hole (27,33) in the wall (1,13,31) or in one of the lids (14,32). The tap extends into the interior of the container and comprises an outer part (6,16,35) which is fixed to the wall or lid and an inner part (5,17,36) which can move within the fixed part and is provided outside the container with a grip (8,26,41). The hole (27) can be located in the wall (1) or lid (14) in a recess (3) in which, when the tap (4,15) is in the closed position, the grip (8,26) attached to the inner part (5,17) of the tap is countersunk.
