Abstract (en)

[origin: DE19621048A1] Novel aqueous bleaches and disinfectants are proposed which contain, in relation to the agents, (a) 1 to 3 wt % alkaline metal hypochlorites, (b) 1 to 5 wt % alkyl ether sulphates, (c) 1 to 4 wt % amine oxides, (d) 1 to 4 wt % fatty acid salts and (e) 0.1 to 2 wt % alkaline metal hydroxides, and possibly other customary auxiliaries and additives. Even without the addition of amine oxide phosphonic acids, the preparations have sufficiently high viscosity and a very long shelf life, the ability to disperse dye pigments and chlorine stability.
