Abstract (en)

[origin: WO9743469A1] The invention relates to a process for producing a mower monofilament which is extruded and drawn from a plastic, whereafter its cross-section is altered, reduced and shaped by the removal of plastic material by laser beams or mechanical cutting blades. During this process, in addition to its straight longitudinal movement, it is rotated or oscillated about its longitudinal axis or the laser beams or blades perform a rotary or oscillating movement about the longitudinal axis of the monofilament.
