Abstract (en)

[origin: EP0913341A2] The inner cladding for tanks containing liquids, and especially gasoline and the like, is a prefabricated inner shell, of a material which is not electrically conductive, such as a film of polyurethane, ester or a fluor plastics. It is in at least two sections (8a-8d,10a,10b) bonded together by at least one seam (9). The inner sides of the sections (8a-8d,10a,10b) are linked by at least one electrically conductive bridge along the seam (9). The bridge is formed, after welding, by a hardened paste or liquid as a soot or polyaniline varnish.
