Abstract (en)
A device for housing detergent agents and/or other agents which can be used in washing articles, more particularly articles of laundry, in the washing tub of a washing machine. Said device being of the type comprising a body (20) of the device and housing means for one or more washing agents wherefrom each washing agent is selectively removed by means of a corresponding flow of water in order to be transported to the tub of the washing machine. The device also comprises a conduit (77) for feeding a flow of liquid to said washing tub, which conduit has an opening (82) for release of the water and is shaped such as to define an air break. This air break conduit being formed directly in the body (20) of said device.
