Abstract (en)

[origin: DE19630408A1] The invention concerns the preparation of a strengthening material comprising a cardboard-based support and a polycarbamide. It involves impregnating almost the entire cross-section of the cardboard-based support with the polycarbamide. The strengthening material (13) is particularly suitable for being (12) to shaped parts (11) made from sheet metal, textiles (15) or plastics as well as composites of these materials. The invention also concerns a method for producing the strengthening material.
