Abstract (en)

[origin: WO9846538A2] The invention relates to the production of a glass composition based on rare earth metal doped chalcogenide and chalcohalide glass with or without co-doping and to a method for producing the same, in addition to a method for producing thin, transparent glass layers and the use thereof as optical components. The glass composition contains at least one element from the third main group, at least one element from the fourth main group, at least one halogenide element and at least one rare earth metal element as a doping additive, in addition to sulfur.
