Abstract (en)

[origin: DE19749466C1] The method for producing rolled or cast metal strip with descaled surface includes annealing, stretch-bend straightening and pickling. Stretch-bend straightening takes place immediately before annealing, while pickling takes place immediately after annealing. The corresponding installation is characterised by the fact that the stretch-bend section (3) is located directly in front of the annealing unit (4), while the pickling section (5) is located directly after it.
