Abstract (en)

[origin: EP0915000A1] The connector links two adjacent car boxes (B,C; A,C), i.e. an end box to a middle box of a three-car string. The middle box is connected by a joint to the end one. The adjacent boxes are supported by a common two-axle bogie. The axis (10) of the joint of the middle box (C) is offset in the direction of the longitudinal axis (19) of the adjacent box relative to the rotating axis (20, 21) of the bogie the opposite way to the middle box.
