Abstract (en)
A current contact roller, for an electrolytic strip coating unit, comprises two cylindrical base components (2, 3) arranged side-by-side within and releasably attached to a roller sleeve (1). Independent claims are also included for: (i) a method of cooling the above current contact roller, in which cooling liquid is fed into (or discharged from) cooling channels (15) at the facing sides (9) of the base components (2, 3) and is discharged from (or fed into) the cooling channels (15) at the remote sides (10) of the base components (2, 3); and (ii) an acid resistant and electrically conductive (e.g. special steel) roller sleeve for the above current contact roller, in which a concentric inner ring (7) is provided (preferably welded) centrally to the sleeve inner wall (4)

Abstract (de)
Die vorliegende Erfindung betrifft eine Stromrolle für eine elektrolytische Bandbeschichtungsanlage, mit einer Rollenachse (6), wobei die Stromrolle aus einem Rollenmantel (1) mit einer Innenwand (4) und einer Außenwand (5) und zwei im wesentlichen zylinderförmigen, den Rollenmantel (1) ausfüllenden Grundkörpern (2, 3) mit Zylindermänteln (11), einander zugewandten (9) und voneinander abgewandten Seiten (10) besteht, wobei der Rollenmantel (1) und die Grundkörper (2, 3) lösbar miteinander verbunden sind. <IMAGE>
