Abstract (en)
A sun blind comprising winding shaft, web of material (1), bottom frame (2) with guide blocks (3) and side guides (4) of a design which is known per se is provided, according to the invention, with a locking device (9) which is actuated by the guide blocks and comprises a resilient locking member (10) and a resilient operating member (11), a guide block (3), during movement from an initial position with the web of material wound up, in a first direction of movement, moving past the locking member (10) via a first pass-through position of the locking device (9) and being locked in a locking position, and the guide block (3), in order to release the locking, initially being moved further in the said first direction of movement to beyond the operating member (11) into an unlocked position, and then the block (3) being moved, in the opposite direction to the first direction of movement, via a second pass-through position of the locking device, the guide block (3) actuating the operating member (11), in such a manner that the operating member (11) moves the locking member (10) out of the path of the guide block (3) which is moving past. <IMAGE>
