Abstract (en)
[origin: EP0915215A2] The dressing or aligning strip (38) is extruded onto the corner profile body (18') for a positive intimate join and also to positively fix woven strip (22) in place. The profile strip (38) stands symmetric to the corner angle bisecting plane (37) so the plane-parallel edges (39,41) go over smoothly through 180 degrees and similarly onto the adjoining respective profile (38) legs (19,21). The lateral interval between the edges (39,41) are roughly equal in both their flat surfaces and in the curved transitions and connections to the profile legs (19,21), i.e. with + or - 30% deviation. CERAMICS AND GLASS - The woven strip fixed to the corner angle is made of glass fibre.
