Abstract (en)  
[origin: EP0915229A1] A roller screen, in particular a roller screen door, comprises screen material, a roll-up mechanism for said screen material, a housing in which said roll-up mechanism is mounted, a pull bar (6), to which the end of the screen material projecting from the housing is attached, and two lateral guides (7,8) for guiding said screen material and the ends of said pull bar. A guide pin is mounted in a channel of each lateral guide, on which guide pin the screen material is guided. Each lateral guide is provided, at least at its end facing away from the housing, with a second channel (15) extending beside the first channel. An end piece (14) comprising a first locking element which projects into the second channel is mounted in the end of each lateral guide, wherein the pull bar comprises a second locking element (18) at its ends, which second locking element mates with the first locking element in the end position for the purpose of locking the pull bar (6) in the end position. <IMAGE>
