Abstract (en)

[origin: EP0915445A2] The system has at least one detection unit, an input data communications unit, and a data processing unit for generating message sets. A management unit processes message sets, an output data communications unit transmits information to subscribers and a display unit visualises traffic related information. The system has an archive for detected and/or processed information, one system monitoring unit, a data flow monitoring unit, a data processing monitoring unit and a time monitoring unit for monitoring message sequences.
