Abstract (en)

[origin: WO9806506A1] The inventive device for squeezing flowable material includes a tubular bag (1) containing the material, as well as an ejection device (2, 5). The tubular bag (1) is inserted into a cylindrical chamber (10) of the ejection device (2, 5). Its open end (8) is located inside an outflow opening (9) of said device. The tubular bag (1) is clamped to the fore-part (11) with a sealing washer (13), the clamping member of which cooperates exclusively with the outflow opening (9) edge formed by the fore-part.
