Abstract (en)  
[origin: DE19631893A1] The present invention relates to a pendulum support, in particular one supporting a motor, with a supporting arm (2), and at least one housing (3;8) which is connected to the supporting arm (2) and contains an internal opening (4;9) with an inner sleeve (5;10) and an elastomer body (5;10) which is placed in between the housing (3;8) and the inner sleeve (5;10) so that the external side of the elastomer body (7) fits closely to the inner side of the housing (3;8). According to the invention the elastomer body is directly vulcanized into the housing (3;8) and materially connected to it. A method for the manufacture of one such pendulum support is also described.
