Abstract (en)

[origin: US6299701B1] A detergent composition containing alkali-metal silicate with an average molar ratio of SiO<sub>2</sub>/M<sub>2</sub>O of 1-4.2, preferably 2.5-4.2, wherein M is an alkali metal, the composition being non-corrosive to glass, crystal, porcelain and decorative prints thereon upon repeated washing. The composition being such that when disposed in a washing medium at a normal working concentration, a protonated silicic monomer Si(OH)<sub>4</sub> is produced in a concentration of at least 2.5x10<sup>-3</sup> mol/liter of the washing medium.
