Abstract (en)
[origin: WO9804793A1] Disclosed is a gutter protection system (GPS) which serves to effect at least two water flow slowing direction reversals in use, and directs rain water into gutter systems (GS) that collect rain water at the lower edges of sloping building roofs, while preventing the accumulation of debris therein. In particular, mounting clip design (MCK) (MCR) (MCV) in combination with gutter protection system (GPS) design, featuring limited mounting clip (MCK) (MCR) (MCV) three-dimensional motion allowing, installation facilitating, hem section (HS) (HS') and projecting lip (C) (PLK') (PLR') (PLV') interconnection, are described.
