Abstract (en)
[origin: WO9805843A1] This invention concerns an insertable connecting element (1) which has a small and thin-walled stop (12) at the connection point (5) which has sides (13) which are parallel or at an acute angle. The stop (12) inserts fully into the profile face walls (6) upon pushing the profiles (3, 4) together, so that the side walls (6) tightly abut above the stop (12). With regard to the stop (12), the connecting element (1) has a tolerance compensator (16) which allows the guidance of the lateral walls (10) into the hollow profiles (3, 4) without vertical play.
