Abstract (en)  
[origin: EP0916284A2] The workbench top (2) is supported on at least three length-adjustable legs (3) operated by a single length adjusting mechanism. Each leg comprises an outer tube (4) containing at least one movable inner tube (5). A cord (15) is used to change the length of the inner or outer tube in the telescopic leg arrangement. The cord passes around at least one guide roll (13a,13b) inside each of the legs. A single drive mechanism is used to operate the cord. The outer tube is raised by winding the cord around a plate or a drum, to lift the board. To lower the outer tube, tension on the cord is released.
