Abstract (en)

The invention is a transverse extending window (1) bar characterised by the fact that it is fixed to windows by compression of the two end plates (3) and feet (5) against the window jamb as a result of the elongation of the bar (1), and by special plates (3",4") anchored in the runners of roller shutters. Various objects such as flower-pot holders, clothes drying racks and child safety structures can be fixed to the said bar (1). <IMAGE>
